

ABSTRACT

-A sleeve-type packaging machine system comprises: first (10) second (20) and third (30) article conveyor means, piece wrapping means (40), piece conveyor means (50) with a conveyor belt (51), a first modular unit (T100-G100) for forming and feeding
5 pieces (S1) of packaging material, and a second modular unit (T200-G200) for forming and feeding pieces (S2) of packaging material. -The said two modular units (T100-G100; T200-G200) can assume at least two transverse positions, namely a first position in which the modular unit (T100-G100; T200-G200) is positioned at least transversely at the side of the packaging machine, and a second position, in which the
10 modular unit (T100-G100; T200-G200) is positioned under the packaging machine.
